## About Dejond

### ● Metal Matters

Dejond started as a small metal stockist in 1901. Today we are a leading supplier to the industry, renowned for our extensive knowhow in metal. Over 100 employees are dedicated to offering tailor-made solutions and establishing long-term partnerships with their customers and suppliers around the globe.

Our core business :

- stock-keeping wholesaler of non-ferrous metals with service centre (milling, punching, cutting,...)
- distributor of exclusive systems for architecture and construction
- industrial supplier of high-quality, value-added mechanical fasteners and fastening systems
- R&D, production, marketing and sale of **Tubtara®** blind rivet nuts.

Considerable investments over the years have helped Dejond strengthen its position as a trendsetter and solution provider. Dejond's name is synonymous with high-quality products, a multi-industry supply, prompt order processing, on-time deliveries and reliable (pre- and aftersales) service. Our ambition is to play a leading role in future product development, always focused on the current and future needs of our customers and end-users.

**METAL MATTERS:** Dejond does more than just deliver metal products, we forge long-term partnerships through dedicated solutions and customer service.

### ● Industrial specialist in fastening technology

In its home market, Dejond Fastening Systems (DFS) has become a major player in fastening technology by offering a full range of high-value mechanical fasteners manufactured by different internationally-recognised suppliers, including its own **Tubtara®** blind rivet nut range. The company is dedicated to serving the manufacturing, transportation, aerospace & defence industries.

Thanks to regular supplier product training, in-house expertise and continuous search for new products, Dejond Fastening Systems is able to keep pace with the latest market requirements and trends. In strong partnership with its suppliers, DFS tries to solve its customers' problems and offer advanced products that are perfectly suited to their specific applications.

It is essential that customers think of us as their partner and not just as a product supplier. Our people have the technical knowhow, experience and enthusiasm to help customers find the right product for their application. As experienced specialists, we are dedicated to our customer-partners' success.

In other words: we offer a total quality solution.

### Quality

All our employees are committed to offering you excellent service, every day. We are all dedicated to distributing and manufacturing high-quality products, ensuring on-time deliveries and paying close attention to customer satisfaction. And to do so, we continuously invest in quality control and audits. Our EN 9100 accreditation is applicable to the development, production and sale of **Tubtara®** blind rivet nuts and distribution of high-value fastening systems.

## ● **Tubtara® - Riveting Matters**

Dejond launched its first **Tubtara®** blind rivet nuts back in 1954, which were then machined on a lathe. Only 10 years later, production methods evolved towards more specialised cold forming technology. Today Dejond offers one of the widest ranges of high-quality, cold-formed blind rivet nuts in the world. Each and every rivet nut is manufactured at its EN 9100 certified production facility in Wilrijk (Belgium). **Tubtara®** is a registered trademark of Dejond.

Besides standard and customised blind rivet nuts, the **Tubtara®** team can also custom-cold-form selected parts according to its customers' drawings for very specific applications.

### EN 9100 Certification: Quality guaranteed

The entire **Tubtara®** team is involved in quality assurance and is more than ever committed to meeting the challenges of the future. Living up to our social and ecological responsibilities, we try to create a balance between economic, social and environmental aspects through responsible manufacturing methodologies.

Upon the specific request of our aerospace customers, the **Tubtara®** Division upgraded its ISO 9001 quality management system to the higher EN/AS/JISQ 9100 level in 2014. This certificate helps Dejond to meet its customers' most stringent requirements while strengthening its position in the aerospace industry which imposes strict safety standards and controls to ensure reliable quality. It is comparable to the TS 16949 automotive directive. You will find Dejond in the OASIS (Online Aerospace Supplier Information System) database of the IAQG (International Aerospace Quality Group).

### 65 years of innovation

Over the last 65 years, the **Tubtara®** division of Dejond has established itself as a pioneer in the production of blind rivet nuts based on a long tradition of innovation. It has been able to use its deep knowledge of materials and cold forming production processes to constantly develop its product portfolio.

The **Tubtara®** team heads into the next 65 years with a clear vision for the future:

- high and consistent quality performance
- innovation and in-house R&D
- customer partnerships through technical and commercial support
- worry-free deliveries

**Tubtara®** has the ambition to stay at the forefront of blind rivet nut design and manufacturing. As such, our goal is to continue to play a leading role in future technological developments, which is why we continue to invest in R&D.

## Tubtara® blind rivet nuts

**Tubtara®** is a mechanical fastener that ensures a strong thread in thin and thick metal plates or profiles, in composites or (engineered) plastics. It is used in applications where there is little or no access from/at the rear. It can clinch separate sheets or profiles together - acting as a rivet - and enables the (dis)assembly of a third component via a bolt or screw.

### ● Benefits

10 reasons why you should choose **Tubtara®** blind rivet nuts:

1. Simple blind installation: applied from one side of the workpiece
2. Low assembly cost: versus other methods of installing threads in plates or profiles
3. Fast, easy assembly: further reducing the assembly cost
4. Zero-risk installation: no damage to the workpiece surface, enabling installation in pre-coated or pre-painted applications for a clean, undamaged thread
5. No deformation of the workpiece
6. No surface preparation required
7. Ideal for close-to-edge applications
8. Suitable for repeated assembly
9. Retained fastener: cf. machinery directive 2006/42/EC (unloseable after setting)
10. Low installation cost: no expensive tools or equipment required

### ● Installation

### ● Applications

**Tubtara®** blind rivet nuts are used in all kinds of sheet metal, plastic and composite applications. They eliminate the need for tapping, welding or working with nuts and bolts. As such, they form an ideal solution for enclosed applications that can only be accessed from one side.

Some market segments:

- Aerospace
- Automotive & EV
- White Goods
- Electronics
- General industrial
- Railways
- Food
- HVAC
- Chemicals
- Marine & Offshore
- Medical
- Truck & Trailer
- Agricultural & Construction Equipment

e.g. metal enclosures, cable trays, leg levelling, window & door profiles, benches, fences, airconditioning, solar panels, supports, roof racks & side bars, battery pack & power box covers

Installation in less than 3 seconds!

## ● Terminology

1. Screw or bolt inserted for assembly
2. Assembled part
3. Workpiece: can be 1 sheet/profile or several sheets/profiles which require clinching
4. Bulb or counter head: the chamber (unthreaded section) is deformed during setting
5. Strong, secure internal thread
6. Open or closed end: closed-end version prevents the ingress of dirt and fluids especially in combination with an underhead seal
7. Chamfer: guides the **Tubtara®** into the hole
8. Shank: round, full- or semi-hexagonal, knurled or splined version
9. Grip: the exact material thickness of the workpiece
10. Head: flat, countersunk, low profile, watertight, anti-turn head or customised head type

## ● Part Description

Steel	M5	RS	UFO	40
Stainless	M10	H	SPX	35
Aluminium	M8	-	UPO	80
Steel	M10	H	SPX	110
Steel ↓ material	M4	KN ↓ shank	UKO ↓ head & shank	30 ↓ max grip
		RS: splined H: hexagonal KN: knurled - : round	U / S: Unigrip F: countersunk head P: flat head K: low profile head O: open end X: closed end	40 = 4 mm 35 = 3,5 mm 80 = 8 mm 110 = 11 mm 30 = 3 mm

## ● How to choose the appropriate **Tubtara®** ?

- What kind of material and surface treatment do you need?
- What is the required thread size?
- Choose the correct griprange for the required material thickness of the application.
- Choose the required head and shank style.
- Do you need an open- or closed-end version?
- Check the technical characteristics of your chosen **Tubtara®**.

We highly recommend testing the product in your specific application in advance.

Samples are available on request.

## Trusted and carefree watertight Tubtara-sheet assemblies

### ● Watertight HX closed-end **Tubtara®** with o-ring seal (mechanical)

- Large flanged head with a cylindrical groove and O-ring seal mounted underneath
- O-ring seal slides into the groove and is - independent from setting force - compressed between head and plate during installation
- Metal-to-metal contact after setting, therefore assuring spin out resistance
- HX concept guarantees a seal away from possible burrs or sharp hole edges
- Seal fully protected against UV-light influences
- Excellent protection against ingress of fluids, moisture, oil or dirt even under high pressures up to at least 10 bar <sup>1</sup>
- Different seal material like Viton, EPDM or Silicone possible
- IP 68 guaranteed under Dejond test conditions

### ● Watertight (H)DPX **Tubtara®** with applied sealant under head (chemical)

- Non-reactive peripheral seal, made of flexible organic based material, applied under the head
- Seal material is gap filling, forming a robust seal between mating surfaces
- Slight variations in seal thickness may influence head height and grip range
- Seal is resistant to many automotive oils, antifreeze and transmission fluids
- Seal can be applied on stocked standard Tubtara parts (all materials and shank types)
- IP 67 guaranteed under Dejond test conditions

Seal type	Seal material	Seal colour	Head type	IP class	Temperature range	Sealing capacity	UV shielded	Shore hardness	Standard / on request

### Setting in composites & plastics

- In-house R&D and technical support for specific applications

Dejond has more than 65 years of experience in developing and manufacturing **Tubtara®** blind rivet nuts.

**Tubtara®** has become synonymous with high quality performance, innovation, in-house R&D and technical support. Always one step ahead of industry demand.

**Tubtara®** blind rivet nuts can be tailor-made in accordance with your specifications and to suit the demands of almost every application. Our in-house R&D engineers always strive to manufacture the best possible blind rivet nut fit. These customised solutions offer additional features to the standard **Tubtara®** such as increased torque-to-turn, sealing, controlled deformation, integration into parent material, centering, pressure spread, compatibility with other fasteners or tools, special thread requirements etc. The Tubtara's designed for the latest aerospace programmes for instance are used in composite material and aluminium structures on wing parts and seats.

Besides blind rivet nuts, Dejond also concentrates on cold forming selected parts according to customers' drawings for very specific applications.

For a detailed summary, visit [www.tubtara.com](http://www.tubtara.com) and click on 'customised solutions'.

Our brochure on customised solutions  
available in different languages

Please take the following into consideration when ordering custom-made rivet nuts:

- Give us an accurate description of the application.
- If possible, include a drawing with indication of sizes, tolerances, material type and exact sheet thickness (incl. tolerances).
- Tell us about other special features or important remarks we need to know.
- If possible, provide us with a sample of the application and/or existing fastener solution.
- Indicate any special technical requirements such as torque value, mount load, tensile or thread strength, etc..
- Specify which type of setting equipment will be used.

Our R&D people will evaluate your request and our Sales Department will provide you with information.

Some examples of additional features providing innovative solutions for your problems:

- Increased torque-to-turn / spin-out resistance
- Spacer function
- Controlled deformation
- (Full) integration into parent material (e.g. composites)
- Flush installation
- Seal function
- Visual identification
- Centering
- Search function (for automatic installation)
- Pressure spread
- Facilitate field repair (increased torque-to-turn resistance)
- Compatibility with available fasteners
- Compatibility with available tools
- Drip / dry function (paint, oil, ...)
- Blind installation / limited space
- Special thread requirements
- (Electrical) conductivity
- Increased push-out force
- Increased pull-out force (thread strength)
- Anti-vibration
- Customised grip (range)

## **Stainless Steel A5 & A6**

Standard shank versions  
Standard head types  
Open or closed end  
1st and 2nd grips

**superior corrosion protection**

### **Cold formed Tubtara® in high alloy austenitic stainless steel A5 and A6**

#### ● Material

Stainless steel A5 : 316 Ti – WNr 1.4571

Stainless steel A6 : 904L – WNr 1.4539

#### ● Applications

- extremely demanding, chloride bearing applications where even A4 fasteners in stainless 316 offer insufficient corrosion protection
- A6 grade is also armoured against strong acid bearing environments
- civil engineering, tunnel infrastructures, ceiling panels in swimming pools etc.

#### ● Important advantages

- Superior corrosion protection, mainly thanks to considerable nickel and molybdenum content
- A6 guarantees increased protection against pitting and crevice corrosion, reaching a PRE (pitting resistance equivalent) value of 35 (compared to PRE 25 for stainless 316)

#### ● Samples

Following samples available from stock: stainless A6 M6 UPO 30 – stainless A5 M8 UPO30 / M8 UPO 65 / M8 UFO 45 / M8 UFO 65 / M8 UFX 45 / M8 UKO 30 / M8 HUKO 30

Development of other dimensions upon request

## Seal Inox® topcoat on stainless steel

Semi-hexagonal or knurled shank  
Standard head types  
Open or closed end  
Different grips

## Seal Inox® topcoat on stainless **Tubtara®** prevents galling

### ● What is Seal Inox®?

Seal Inox® is a topcoat that makes it easier to assemble stainless steel threaded parts. The integrated lubricant additive in this topcoat prevents gripping during assembly, also called 'galling'.

Galling is caused by adhesion of two sliding surfaces under increased friction and often occurs between stainless steel threaded connections.

Characteristics :

- thin dry layer
- can be applied in single or two layers [to avoid any assembly problem, we recommend to use a (hex) hole tolerance of 0.05 - 0.15 mm instead of 0 - 0.1 mm]
- visually distinguishable grey treatment, other colours on request
- friction coefficient 0.09 – 0.14 (according to DIN EN ISO 16047)
- temperature resistance 180°C
- conforms to ELV and RoHS, Cr<sup>6+</sup> free

### ● Benefits of a Seal Inox® topcoat on stainless **Tubtara®** blind rivet nuts

- reduces friction and prevents galling
- provides a higher clamping force
- reduces assembly time
- slows down contact corrosion
- protects against various chemicals e.g. chlorides, acids and oils
- can be applied on our different stainless steel qualities: 304, 316, 316Ti, 904L
- is preferentially applied on hexagonal or knurled Tubtara's since Seal Inox® will be present on both inside and outside surfaces, thus potentially reducing torque-to-turn for round Tubtara's

Galling between a stainless bolt or screw and a stainless **Tubtara®** can occur when the assembly is done with a power tool (often at high speeds), but also when the bolt or screw is assembled and tightened by hand.

### ● Availability

Seal Inox® is only applied to order (non-standard).  
Prices and lead times available on request.

## **Tubtara® with controlled deformation for use in plastics and composites**

- **Design & Applications**

Specific **Tubtara®** blind rivet nut design, optimised for applications in engineered plastics and composite materials. The exact (deformation chamber wall) location where the bulge formation initiates, is pre-defined. This improved setting behaviour avoids high stress build-up and consequent deformations or damages in the parent material.

- **Materials & Installation**

Ideal for use in engineered plastics and composite material, such as CFRP. Depending on the application parameters, slightly different hole sizes (+0.2mm) may be required.

The use of a setting tool featuring a customised anvil with a nose is recommended.

- Important advantages

- Ensures strong threads in brittle or soft materials
- Minimal stress build-up in the hole (on hole edges)

- No damage to the workpiece
- Avoids visual deformations in the parent material due to high stresses
- Limits composite material failure risks (e.g. cracks and yield zones, delamination, damaged fibers,...)

- Availability

- Only available as an application specific, customised part

## Setting equipment & tooling

A **Tubtara®** can be set with a hand-, (oleo-)pneumatic or battery tool, a press or an automatic installation unit.

- Hand tool

Small hand tool for prototype work and repairs

## Setting method

Select one of the **Tubtara®** blind rivet nuts out of our product range and a setting tool adequate for the application. Take a test workpiece and drill an appropriate hole

### STEP 1

Screw the **Tubtara®** blind rivet nut (A) on the mandrel (B) of the setting tool. In the case of the open version, the mandrel should protrude about 1 mm. For closed rivet nuts, continue screwing until you feel resistance. Screw the anvil (C) against the head of the **Tubtara®** and block it with the locking nut (D).

### STEP 2

Insert the **Tubtara®** blind rivet nut, mounted on the setting tool, into the hole of the workpiece

### STEP 3

Set the **Tubtara®**. The Tubtara's deformation chamber now forms the counter head (bulb) on the underside of the workpiece

### STEP 4

Unscrew the mandrel from the **Tubtara®**.

### STEP 5

The **Tubtara®** blind rivet nut is now set. You can now easily insert your bolt or screw to assemble another component.

## ● Countersunk heads

Are you using a **Tubtara®** blind rivet nut with a countersunk head? Always countersink at 90° so that the head of the installed **Tubtara®** protrudes about 0.1 mm above your workpiece. This ensures direct contact with the assembled component.

Don't have the possibility to countersink?  
Use a low profile head

## Materials

The **Tubtara®** is available from stock in steel, aluminium and stainless steel 304 & 316.

For critical bearing environments, we can also offer the following solutions to cope with most environmental conditions :

- superior cold formed stainless A5 or A6 quality on demand,
- high strength (HS) grades in steel and aluminium on demand,
- several finishing options on stainless like Cadmium, ZnNi, Seal Inox®,
- passivated stainless steel.

Available from stock:

Material			WNr
Aluminium	AlMg2,5	5052	3.3523
Steel	C8C	QST 34-3	1.0213
Stainless steel A2	304Cu		1.4567
Stainless steel A4	316Cu		1.4578

Available on request :

Material			WNr
Stainless steel A5	316Ti		1.4571
Stainless steel A6	904L		1.4539
HS (High Strength) steel	23MnB4		1.5535
HS (High Strength) aluminium	AlMg3,5	5154	

Material specifications are always subject to modifications.

### ● How to choose the right material ?

Choosing the right material and coating for your **Tubtara®** blind rivet nuts is very important for obtaining optimal functionality during the whole life cycle, especially when environmental conditions are unknown or critical. Influences can be chemical (elements dissolved in water), abrasive (sand), heat, friction, contact with other metals, corrosive environments, etc.

The ideal material choice is not always easy and all conditions should be taken into account. We therefore strongly advise to check the following tables and do some tests in the specific application environment in advance.

● Requirements & solutions

	Aluminium	Steel with appropriate coating	Stainless A2	Stainless A4	Stainless A5	Stainless A6
colour distinction		xxx				
visual identification		xxx				
weight-saving	xxx		x	x	x	x
durable	x	x → xxx	xx	xxx	xxx	xxx

top coating possible		xxx				
full passivation possible (*)			x	x	x	x

Legend	
o	possible influence
x	small influence
xx	larger influence
xxx	largest influence

(\*) all stainless steel by Dejond has undergone a chemical/mechanical cleaning process (natural passivation)

## ● Galvanic couples

A suited material choice is not always easy and all conditions should be taken into account. The table below shows some connection guidelines for corrosion:

base metal wherein Tubtara is set		Blind rivet nut material		
		zinc plated steel	aluminum	stainless steel 304 & 316
	aluminium			
	zinc plated steel			
	brass, copper	TT®	TT®	
	stainless steel 4xx	TT®	TT®	
	stainless steel 304 & 316	TT®	TT®	

Legend	
	base metal and <b>Tubtara®</b> ok
	base metal corrodes where in contact with <b>Tubtara®</b>
TT®	base metal ok but <b>Tubtara®</b> will corrode
	corrosion base metal heavily increased by <b>Tubtara®</b>

We strongly advise to do some tests in the specific application environment.  
 Samples are available on request.

## Coatings

A suitable coating choice can offer additional characteristics to your **Tubtara®**.

- Coating on steel available from stock

### Zinktop

High-quality Cr<sup>6+</sup> & Ni free plating  
 Conforms with ROHS, Reach, ELV directives  
 96 h white rust - **480 h red rust**  
 10µ ±2µ

- Survey available coating offer

photo	coating description	standard / on request	salt spray test (h) ISO 9227		colour / aspect	corrosion protection	RoHS / Reach compliant	remarks
			white rust	red rust				
1	Zinc blue/white Cr <sup>3+</sup>	REQ	24	72	blue/white	*	<input checked="" type="checkbox"/>	Cr <sup>6+</sup> free
2	Zinc black Cr <sup>3+</sup>	REQ	48	96	black	*	<input checked="" type="checkbox"/>	Cr <sup>6+</sup> free
3	Zinc yellow Cr <sup>3+</sup>	REQ	96	240	light yellow	**	<input checked="" type="checkbox"/>	Cr <sup>6+</sup> free
4	Zinktop	ST	96	480	light grey	****	<input checked="" type="checkbox"/>	Cr <sup>6+</sup> and Ni free
5	Zinktop Cobalt free	REQ	96	480	light grey	****	<input checked="" type="checkbox"/>	Cr <sup>6+</sup> , Ni and Co free
6	Ultra 1000	REQ	240	1000	light grey	*****	<input checked="" type="checkbox"/>	Cr <sup>6+</sup> and Ni free
7	ZnNi (Zinc Nickel)	REQ	quality according to customer's specs					
8	Vibraseal®	REQ	x	x	red, green			seals + anti-vibration
9	Gleitmo®	REQ	x	x	-			friction reduction
10	Seal Inox®	REQ	x	x	matt grey	*****		avoids galling
11	Passivation	REQ				*****		only on stainless steel

The Ultra 1000 is more than doubling the resistance to red rust in the salt spray test compared to the standard Zinktop. The offer of blue and black trivalent coatings, as well as the Cobalt free Zinktop, are developed to tackle imminent Reach regulations and can be delivered on demand.

\* Zinc yellow Cr<sup>6+</sup> plating is no longer standard and has been omitted from this catalogue.

Due to REACH phase out, production of steel yellow hexavalent chromated parts has discontinued completely.

For availability, only until depletion of stock, please contact our customer service.

## ● Stainless Steel

All stainless steel Tubtara's have been treated by a special process to obtain a natural passivation layer, improving the corrosion resistance compared to common stainless steel parts in the market.

Optional coatings on stainless steel are

- Gleitmo® / Seal Inox® / Cadmium / ZnNi
- full passivation.

## ● Why use a coating ?

Requirements & solutions :

	Zinktop on steel	Coloured plating on steel	Passivation on stainless steel	Gleitmo®	Vibraseal®	Seal Inox®	Molykote®

We strongly advise to do some tests in the specific application environment.  
 Samples are available on request.

## Technical Data

### ● General tolerances

	Head form	Dimensions in mm	Dimensions in inches
D (head diameter)	Flat head Countersunk head Low profile head	± 0,35 0 -0,5 -0,15 +0,3	.014 0 -.020 .006 +.012
K (head thickness)	Flat head Countersunk head Low profile head	±0,15 0 +0,3 -0,05 +0,3	.006 0 +.012 .002 +.012
L (length)	General Stainless M10 shank 13 mm	±0,35 ±0,5	.014 .020
Metric thread= 6H			
Shank size	General (incl. KN) Splined shank (RS) M10 shank 12,4 mm	-0,02 -0,15 ±0,08 ±0,08	.001 -.006 .003 .003

Example:

### ● Recommended tightening torque values (Nm)

Max. recommended torque to avoid damaging the threaded connection and ensure optimal screw-nut assembly:

	M3	M4	M5	M6	M8	M10	M12
Aluminium	2,0	2,2	4,5	9,5	17,0	30,0	
Steel	2,5	3,0	5,9	11,0	25,0	49,0	80,0
Stainless Steel	2,5	3,0	5,9	11,0	25,0	49,0	80,0

Recommendations for 8.8 bolts in steel and class A2-70 bolts in stainless steel.

## ● Mechanical properties - How do we test them?

### PULL-OUT (thread strength)

Determines the force (kN) required to destroy (pull out) the threads of the **Tubtara®** blind rivet nut, by pulling a screwed-in mandrel towards the head of the **Tubtara®**.

In many cases the mandrel will break before the threads would fail (see ">" in mechanical values table).

### MAXIMUM TORQUE

Determines the maximum torque (Nm) that the **Tubtara®** can resist. The Tubtaras are installed in a bolted assembly, using a non-rotational plate.

In most cases the bolt will break before the threads would fail. (see ">" in mechanical values table)

### TORQUE-TO-TURN (spin out)

Determines at which couple (Nm) the **Tubtara®** starts to rotate (spin) in the parent material in which it is installed. Tested from the blind side with a tightened bolt and a washer.

In an assembly, required torque-to-turn force will be higher, due to increased clamping pressure and friction resistance after tightening the assembled bolt.

In some cases the bolt will break before the threads would fail. (see ">" in mechanical values table)

### SHEAR TEST

Tests the strength (kN) of an installed **Tubtara®** (without assembled bolt) towards shearing. In many cases the **Tubtara®** will be pulled out of the plate without shearing, or shear in the middle between the 2 plates.

Plate material, hardness and how holes are formed (drilled, punched or laser cut) will influence test results.

## ● Mechanical properties

The tables below show some indicative standard values for Tubtara's with round or hexagonal shank and flat head in first grip for middle sheet thickness within range.

### Mechanical reference values

product	material	pull-out kN	max. torque Nm	torque-to-turn Nm	shear test kN
Round shank

	SS 304Cu	25,0	7,0	21,0 to 22,0	17,0 to 17,5

Length under plate of open end parts: values obtained after setting.

To obtain the length under the plate after setting of **closed end parts**, you can add the following sizes to the above-mentioned:

Steel and aluminium (mm)		Stainless steel (mm)	
M3	3,5	M4	4,5
M4	4,5	M5	6,0
M5	6,0	M6	7,0
M6	7,0	M8	8,0
M8	8,0	M10	7,0
M10	10,0	M12	10,0
M12	10,0		

In some cases the real length will be shorter. All dimensions can be checked on the technical data sheets in our catalogue.

In practice, variations may result from differing setting and environmental conditions. The values mentioned can be used as a reference and optimised by using additional features. We strongly advise customers to perform their own tests in the correct material thickness and specific application.

**Grip range influences**

The following values can be used as a guidance for other versions :

TYPE	Grip	ALUMINIUM			STEEL			STAINLESS STEEL 304 + 316		
		SETTING FORCE	STROKE	PULL-OUT	SETTING FORCE	STROKE	PULL-OUT	SETTING FORCE	STROKE	PULL-OUT
		mm	N	mm	N	N	mm	N	N	mm

**Setting Force or Upset Load:** Force (in Newton) necessary to deform the **Tubtara®** referred to in an adequate way.

**Upset Stroke:** Stroke (in mm) that should be set on the setting tool to give the **Tubtara®** referred to, the adequate deformation.

The mentioned values are average reference values only.

We strongly advise the customer to do his own tests in the proper material thickness and specific application.

Semi-hex parts have a setting force which is 10 to 15% lower than full hex or round parts but have the same fixation strength.

#### High Strength Materials

- 23MnB4: ±20% mechanical strength compared to C8C
- AlMg3,5: ±20% mechanical strength compared to AlMg2,5

- HX **Tubtara®** with seal under the head

Information about NBR O-Ring & compatibility with other products					
Shore Hardness	70 - 95	Aromatic Hydrocarbons	x	Lye	x
Hydraulic fluids	xxxx	Aliphatic Hydrocarbons	xxx	Chlorinated Hydrocarbons	x
Fuel Oils	xx	Water under 80°C	xxx	Ozone & Sunlight	x
Organic Oils	xxxx	Water over 80°C	x	Temperature range °C	-35 +120
Brake Fluid	-	Alcohols	xx	Electr. properties	-
Silicone & Grease	xx	Ketone	-	Compression sets	xxx
Gasoline	xxx	Acid (concentrated)	-	Flame resistance	No
Aromatic fluids up to 50 %	xx	Acid (diluted)	x		
Kerosene	xxx				

Key: xxxx very good --> x satisfactory - not suitable.

Storage: protect against UV-light; store in a dry and dark place (all boxes are marked)  
 Seals in other materials like Viton or EPDM on request.

- (H)DPX **Tubtara®** with seal under the head

Information about the non-reactive, peripheral seal, made of flexible organic based material:

Material	Polyurethane	Reusability	yes
Colour	blue	Bead form	concave
Sealing capacity	> 150 bar	Cure method	heat cure
Temperature range	-40 +100 °C**	Waterproof	IP67 *
Shore hardness	50 A range		

Compatibility with other products : resistant to many automotive oils, antifreeze and transmission fluids.

\* The seal reassures an IP67 waterproof **Tubtara®**-sheet assembly if correctly installed (only guaranteed under Dejond test conditions, certificates available)

Storage : min. 4 years shelf-life if stored in dry conditions (room temperature)

\*\* For continuous usage, 150°C possible for intermittent use subject testing.

## ● Conversion table
